## Seat construction

Fig.	Type of seat	Description	Fluid	Temperature of the working medium	Working pressure	Material of seat insert	Seals
3a	Seat PMSS with elastomer and thermoplastic	Metallic contact between the seat and the ball guarantees protection of secondary seals that are made of thermoplastics and elastomers.	Gases with defined content of mechanical impurities.	* from -46°C to 220°C	class 150-900 (PN 16-160), up to class 1500 (PN 250) only to NPS 6 (DN 150)	POM, PEEK, HNBR, VITON	HNBR, VITON
3b	Seat with thermoplastic	Metallic contact between the seat and the ball provides protection of thermoplastic.	Liquids and gases with defined content of mechanical impurities.	* from -60°C to 220°C	class 150-2500 (PN 16-420)	RPTFE, PEEK	HNBR, VITON
3c	Metal-to-metal seated seat	Seating surfaces of the seat and the ball are sprayed with hard metal. The surfaces are lapped together to achieve the required tightness.	Contaminated gases and liquids, mixtures of solids and liquids.	* from -46°C to 220°C	class 150-1500 (PN 16-250)	metal+TCC – metal+TCC	HNBR, VITON, GRAFIT
3d	Cryogenic seat	Tightness is provided by a seat insert made of RPTFE or PCTFE (KEL-F) thermoplastic.	Liquefied gaseous substances.	* from -46°C to -196°C	class 150-1500 (PN 16-160)	RPTFE (do -100°C), PCTFE (do -196°C)	LIP-SEAL
	**Special seats	Depending on the fluid and the service parameters, also special designs of seats are available.	Steam, sea water, chemical compounds, etc.	acc. to request	acc. to request	Elastomers and thermoplastics of various types (NYLON, DEVLON).	Elastomers of other types, graphite boxes.

\*Temperature range of the ball valve depends on the material of the seat insert and the material of seals.  
 For temperature of the working medium above 200 °C is the limit value of pressure related to the quality of the material of body acc. to ANSI B16.34 or EN 1092-1

\*\*The design of the special seat is always a part of the drawing documentation submitted with the quotation.
